

— CONFIDENTIAL CLIENT PROPOSAL

Corporate learning that follows your org chart.

Zynext TalentHub is a multi-tenant learning platform for organizations that must assign training, prove competence, issue verifiable certificates, and report to executives — across a real company structure, not a flat class list.

Prepared for

Prospective client leadership, L&D, HR, and IT

Product

Zynext TalentHub

Date

1

Public certificate verify URL

An operating system for corporate learning — assign, examine, certify, prove.

Built for enterprises, academies, and regulated teams. The client receives a complete web application: a Next.js learner and admin experience, an Express API, and PostgreSQL with tenant isolation on every organization-owned record.

What you get on day one

- Learner home, catalog, and a full learn player
- Course Studio with modules, live sessions, SCORM 1.2, and assessments
- Org-tree assignment to organization, division, department, team, or person
- Question banks, grading queue, and certificate designer
- Analytics hub, seven operational reports, compliance ZIP
- Platform console for Super Admins operating many tenants

Five reasons this is not a classroom LMS

1. **Org-aware.** Assign once to a department; enrollments follow the tree. Managers see only their subtree.
2. **Studio, not a file dump.** Eight lesson types, completion rules, skills, publish history.
3. **Assessments that gate proof.** Pre, final, survey, module quiz — finals can block the certificate.
4. **Certificates you can show an auditor.** Unique numbers, branded templates, public verify.
5. **Reporting in-product.** Eleven analytics tabs, CSV / PDF / XLSX, scheduled reports, BI API keys.

Presented throughout as **Zynext TalentHub** — one commercial name on login, admin, learner, and platform surfaces.

02 · THE COST OF INFORMAL TRAINING

Spreadsheets assign. Word files “certify.” Nobody can prove it.

Zynext TalentHub is designed to remove the failure modes we see when L&D is assembled from email, Drive, Forms, and a calendar.

Pain today

What happens

How Zynext TalentHub answers

Assignment by spreadsheet

HR emails a list; nobody knows who finished

Assign to org / division / department / team / user with live enrollment status

Managers see everyone

Org-wide dashboards leak other departments

Manager scope is the department subtree

Completion is a checkbox

Learners skip content; “done” is honor system

All lessons, required lessons, or percentage — plus lesson prerequisites and a final exam lock

Certificates are templates

Easy to forge; no lookup

Globally unique number, branded design, public /verify page, revoke

Compliance expires quietly

People stay “certified” forever

Recertify-every-N-days; expiry notices; job re-opens the enrollment

Content in five tools

Video, quiz, SCORM, and classroom live apart

Course Studio + SCORM 1.2 + ILT/VILT + assessments + community

Auditors want a pack

Weeks of export wrangling

Compliance ZIP + audit logs + scheduled reports

Multi-company operations

One install per company, or data bleed

Shared-database multi-tenancy and a platform console

Four planes. One platform.

Closer to TalentLMS / Docebo-shaped problems than Moodle or Canvas classrooms — with a modern admin shell.

01

Learn

Dashboard, catalog, learn player, community, own certificates and reports. Self-enroll only if the organization allows it.

02

Studio

Author modules and eight lesson types. Assessments, sessions, skills, SCORM, assignments, publish history.

03

Proof

Certificates with unique numbers, public verification, recertification, path certificates, compliance ZIP.

04

Platform

Super Admin console: tenant CRUD, health KPIs, platform audit. Isolated from org users.

Five personas. No custom role builder — on purpose.

The complete role set is four organization roles plus a platform Super Admin. Navigation is permission-filtered so employees never see admin surfaces.

PLATFORM

Super Admin

Signs in at /platform/login. Creates, inspects, suspends, and deletes tenants. Cannot exist as an org user.

- Tenant lifecycle
- Platform audit
- Audited org-scoped support

BUYER

Org Admin

Owns the tenant: tree, people, SSO, certificates, integrations, reports.

- Full studio & banks
- Revoke certificates
- API keys & webhooks

OPERATOR

Manager

Accountable for a department. Invites employees only. Needs a department on the profile.

- Subtree analytics
- Assign in department
- Cannot publish or grade

AUTHOR

Instructor

Builds and runs courses they created. Org admins can edit any course.

- Publish & media
- Banks & grading
- No org tree edits

LEARNER

Employee

Clear path: assigned, due, next lesson, certificates. MFA and profile in settings.

- Catalog & player
- Own reports only
- No other people's PII

Shipped in the running product — not a wishlist.

Authentication & security

Slug + email login so the same person can exist in two tenants. 15-minute access tokens, 7-day rotating refresh, MFA (TOTP), OIDC SSO, lockout after 10 failures, password 12–128 with a blocklist. Helmet, CORS allow-list, HSTS in production.

Multi-tenant org model

Shared PostgreSQL with organization_id isolation. Drag-and-drop tree: Division → Department → Team. Move-reconcile when people change seats. Settings: timezone, self-enroll, answer reveal, certificate prefix (default COR), USD or MMK.

Course Studio

Tabs: Outline, About, History, SCORM, Assessments, Sessions, Assignments, Skills. Status DRAFT → PUBLISHED → ARCHIVED. Completion: all lessons, required, or percentage. Prerequisites, availability windows, duplicate, revision snapshots.

Eight lesson types

Video, reading, document, knowledge check, discussion, instructor-led, virtual ILT, SCORM 1.2. Caps: thumbnail 1 MB, documents 25 MB, video 80 MB, SCORM 100 MB. Media only via authenticated API — raw /uploads is forbidden.

Enrollments & progress

Five assignment targets. Due dates, recertify-every-N-days, reminders. Statuses: enrolled, in progress, completed, revoked. Sources include path and recertify. Lesson watch position and completion.

Assessments & banks

PRE, FINAL, SURVEY, MODULE_QUIZ. Seven types: MCQ, true/false, multi-select, short answer, fill-blank, matching, essay. Bank draw by count and tags. Timed attempts. Default pass 70%, max 3 attempts (surveys unlimited).

Grading queue

Objective items auto-score. Short answer and essay go to /grading. Score plus feedback. Statuses: auto-graded, pending review, graded, expired.

Certificates

Auto-issue at 100% progress and a passing final if one exists. Themes midnight, ivory, slate. Logo, signature, background. Public verify and PNG download. Path certificates use PREFIX-PATH.

Analytics & reports

Eleven tabs including compliance, ROI, skills, and xAPI. Seven reports with CSV, PDF, XLSX. Schedules daily / weekly / monthly. API keys scoped to reports:read for BI pull.

Learning paths & skills

Ordered courses with unlock notifications and a path certificate. Skill catalog mapped to courses and system roles, levels 1–5. This is a light competency graph, not a full talent suite.

Community & notify

Eight notification kinds, org/course announcements, org and course forums. Webhooks today: enrollment.completed and report.delivered.

Platform jobs

Five HTTP jobs behind a job secret: reminders, recertify, scheduled reports, cert-expiry, analytics snapshots. Production must schedule them (cron or Kubernetes). There is no in-app worker.

Do not claim AI. There is no generative authoring, auto-question generation, chatbot tutor, or LLM grading. Course Studio is human-authored. SCORM is 1.2 only — not 2004.

From outline to published program in one place.

Authoring path

Learner path

Catalog or dashboard assignment → enrollment → optional pre-assessment gate → learn player → lessons unlock by prerequisite → completion rule → final exam at 100% progress → certificate → webhook.

Continue learning

Assigned not started

Due soon

My paths

Recent certificates

Fifteen journeys, from invite to verified certificate.

Each workflow is how the running system actually behaves — including the exception paths a buyer's IT team will ask about.

1. Register a new organization

Actor: prospective Org Admin · Trigger: /register

1

Open register

Org name, slug, admin identity, password

2

Validate

Unique slug, password policy

3

Provision tenant

Seed four roles + Headquarters tree

4

Session

ORG_ADMIN tokens → /dashboard

Exceptions: slug taken, weak password, rate limit 5 / 15 min. Enterprise clients typically disable public registration and let Super Admin create the tenant instead.

2. Login and session

Actor: org user · Trigger: /login with slug + email + password

1

Org check

Must exist and be ACTIVE

2

Lockout

10 failures block the account

3

MFA fork

If enabled, 5-minute mfaToken + TOTP

4

Route

analytics:read → Admin dashboard, else Learner home

Refresh rotates the token family; reuse of an old refresh revokes the family. INVITED users cannot sign in until they accept. Suspended org or user is rejected.

3. Password reset

Actor: org user · Trigger: /forgot-password

1

Request

Email + organization slug

2

Token

One hour, single use

3

Reset

Policy-enforced new password

Copy should stay enumeration-safe. Production mail must actually send — see honest limitations.

4. Invitation and RBAC

Actors: Org Admin or Manager (employees only)

1

Assign role

Admin: four roles. Manager: EMPLOYEE only

2

INVITED

7-day token, CSV import supported

3

Accept

/accept-invite → ACTIVE + session

4

Lifecycle

Resend, unlock, suspend, bulk status

5. Platform tenant onboarding

Actor: Super Admin · /platform/organizations

1

Platform login

Separate identity table

2

Create org

Name, slug, settings

3

Invite first admin

Inside the tenant

4

Optional suspend

All org logins fail

6. OIDC single sign-on

Configure in org settings · Learner uses SSO on login

1

Admin sets IdP

Issuer, client, email domain
allow-list

2

Discovery

/.well-known/openid-
configuration

3

Redirect

openid email profile

4

Exchange

Short-lived token → session

7. Course creation to publish

Instructor (own courses) or Org Admin

1

DRAFT

POST /courses

2

Studio

About, outline, media,
SCORM

3

Assess & sessions

Live ILT/VILT + skills

4

Publish

CourseRevision snapshot

5

Assign

Target + due + recertify

Cannot assign until PUBLISHED. Instructors cannot mutate someone else's course. Availability windows return not-yet / no-longer-available.

8. Discover → enroll → learn → complete

Employee or Manager as learner

1

Enter

Assignment, path, catalog,
or manual enroll

2

Pre-gate

Pass PRE if required

3

Learn

/learn/[courseId], lesson
prerequisites

4

Complete rule

All / required / percentage

5

Final

Only at 100% progress

6

Proof

Certificate +
enrollment.completed

Overdue is reporting and reminder — not a hard lock. Revoked enrollments and full ILT sessions are rejected.

9. Assessment lifecycle

Author → learner → grader

1

Author

Items or bank draw

2

Start

Shuffled snapshot +
optional timer

3

Submit

Auto-score objective items

4

Review

Essay / short answer pending

5

Grade

Score + feedback → GRADED

Timer expiry marks EXPIRED with score 0. Max attempts enforced. One PRE and one FINAL per course.

10. Certificate issuance

System issues · Org Admin revokes · Public verifies

1

Eligibility

100% + passing final if present

2

Number

{PREFIX}-{YEAR}-... globally unique

3

Verify

/verify/[number], PNG download

4

Recertify

Job may expire cert and reopen enrollment

11. Analytics and reports

Org Admin, Manager (subtree), Instructor (own courses)

1

Hub

/analytics with date and org filters

2

Drill

Learners, courses, compliance, ROI, xAPI

3

Operate

/reports export or schedule

12. Platform operations

Super Admin + host operations

1

Console

Create / patch / suspend tenants

2

Audit

Platform-wide log

3

Jobs

HTTP calls with X-Job-Secret

13. File and media upload

Authors, avatars, certificate assets

ASSET	LIMIT	NOTES
Avatar / thumbnail	1 MB	Authenticated media API
Intro or lesson video	80 MB	No transcoding / ABR
Lesson document	25 MB	PDF and slides
SCORM package	100 MB	Version 1.2 only
Certificate images	~2.5 MB body	Logo, signature, background

14. Learning path assignment

Path author + assigner + learner

1

Publish path

Ordered courses, required flags

2

Assign tree

Same five target types

3

Unlock

PATH_COURSE_UNLOCKED

4

Path certificate

When required courses complete

15. Live session (ILT / VILT)

Instructor creates · learner registers · attendance marked

1

Schedule

Time, timezone, location or URL, capacity

2

Register

Enrolled learners only

3

Attend

ATTENDED / NO_SHOW / CANCELLED

Permission-filtered navigation. Clear nouns.

Primary app areas

Dashboard · Catalog · Community · Courses / Studio · Learning paths · Organization ·
Announcements · Users · Enrollments · Question banks · Grading · Analytics · Reports · Skills · Audit ·
Certificates · Settings · Integrations

Platform: Overview, Organizations, Audit. Public: login, register, reset, invite, certificate verify. Learn
player: /learn/[courseId].

```
Organization └─ Users × Roles (ORG_ADMIN, MANAGER, INSTRUCTOR, EMPLOYEE) └─  
Division → Department → Team └─ Course → Module → Lesson → Enrollment → Progress  
| └─ Assessment → Attempt → Certificate | └─ TrainingSession → Registration └─  
LearningPath → PathEnrollment → PathCertificate └─ QuestionBank → BankQuestion
```

Tenant isolation you can explain in a security review.

Identity

Passwords hashed with bcrypt (production cost 12+). Short-lived access tokens, rotating refresh. Optional authenticator MFA. Optional company OIDC.

Authorization

43 named permissions. Managers confined to their department. Instructors write only courses they created. Employees stay on self.

Isolation

Every learner, course, and certificate belongs to one organization. Org users cannot switch tenant via query parameters. Platform access is explicit and audited.

Uploads

Files are not world-readable. Direct /uploads is blocked. Playback goes through an authenticated media service.

Audit & proof

Mutating actions log actor, action, resource, request id, IP. Certificates are uniquely numbered and publicly verifiable (30 lookups / minute).

Honest boundary

We do not claim SOC 2, ISO 27001, GDPR DPA, or HIPAA — none are evidenced in the product. Email, Redis-backed limits, and object storage are go-live decisions.

Modern stack. Capacity proven in a pilot — not invented here.

LAYER	TECHNOLOGY
Web	Next.js 15, React 19, TypeScript, Tailwind, shadcn, TanStack Query, Geist, dark mode
API	Node.js 22, Express 4, Zod, Prisma 6, JWT, otplib, PDFKit, ExcelJS, Helmet
Data	PostgreSQL 16, organization_id on tenant tables
Media	Local disk + authenticated media route; SCORM 1.2 unzip + HTML player
Ops	/health, /ready (DB), OpenAPI JSON, HTTP job endpoints

Designed limits

- Pagination default 25, max 100; catalog 24 per page
- Enrollment cascade in chunks of 500
- JSON body 1 MB; large media on dedicated routes
- If cron is down, reminders and recertify do not run
- No published concurrency or CDN numbers — treat scale as a pilot proof point

Discovery → pilot → production. Do not skip the mail and jobs.

0

Discovery

1–2 weeks. Brand, register on/off, SSO vs MFA, org tree, mandatory courses, hosting, KPIs.

1

Pilot

4–6 weeks. 50–200 learners, 3–5 courses, one path, branded certificate, weekly overdue review.

2

Production

6–10 weeks. CSV/SSO, cron, SMTP, backups, disable public register, compliance ZIP rehearsal, optional BI key.

3

Harden

Redis for limits/idempotency, object storage, horizontal API, load-test video and SCORM.

Out of the box

Four org roles + Super Admin, certificate designer, USD/MMK, OIDC, local uploads, HTTP jobs, reports in three formats.

Typical statement of work

Custom roles, SAML/SCIM, S3/Azure Blob, white-label, extra webhooks, native apps, SCORM 2004, any AI feature. Do not sell these as standard until they are in a SOW.

12 · SUCCESS THE CLIENT CAN SEE IN-PRODUCT

KPIs without a second BI tool – unless you want one.

Active learners

Enrollments

Completion rate

Certificates issued

Overdue training

Assessment pass rate

Engagement / trends

Training ROI

Skill coverage

Login activity

Recommended pilot bar: ≥ 90% of assigned learners enrolled; ≥ 80% completion of the flagship compliance course within the due window; zero cross-tenant findings; live certificate verify to an auditor.

The org tree is a first-class object. The certificate is a product.

Hierarchy, not groups bolted on

Drag-and-drop tree, assignment cascade, manager subtree, move-reconcile.

Two control planes

Tenant workspace and a Super Admin console with isolated identity — built to operate as multi-tenant SaaS.

Completion is policy

Required lessons, percentage rules, pre-test gates, final exam lock, recertify that invalidates the old pass.

Proof as a feature

Designer, unique numbers, public URL, path certificates, expiry jobs — not a plugin afterthought.

Operator analytics pack

Eleven hubs including compliance and ROI, scheduled multi-format reports, one compliance ZIP.

Security visible in the IA

Slug-scoped login, MFA, OIDC, lockout, media ACL, audit, hashed API keys.

14 · HONEST SCOPE

A credible proposal states this before procurement does.

ITEM	SEVERITY	WHAT IT MEANS FOR YOU
Email logs “queued” rather than SMTP send	High for go-live	Invites, resets, certificate mail, and scheduled reports need a real transport.
Jobs are not self-running	High	Host must cron the job secret endpoints.
In-memory rate limit and enrollment idempotency	High at scale	Unsafe across multiple API processes until Redis (or equivalent).
Local disk media	High at scale	No CDN; multi-instance sharing is a project.
Public /register	Medium	Creates a new tenant — usually off for enterprise.
Four roles only · SCORM 1.2 only · thin integrations	Medium	No custom roles, no SCORM 2004, one API scope, two webhook events.
No AI, no native apps, no SOC/ISO claim	RFP risk if oversold	We will not invent certifications or generative features.

15 · NEXT STEP

A half-day discovery. A sandbox tenant. A live certificate verify.

Walk the org tree, Course Studio, grading queue, analytics, and public verify page. Leave with a one-page decision log: identity, mandatory curriculum, hosting, and whether self-registration stays on.

Then: pilot one department → production (SMTP, cron, backups) → optional SOW for object storage, Redis, SAML/SCIM, or white-label.

[Schedule the discovery workshop](#)

Terms as Zynext TalentHub uses them

TERM	MEANING
Organization / tenant	Isolated customer workspace. Login requires its slug.
Org tree	Division → Department → Team hierarchy.
Assignment vs enrollment	Assignment is the targeting rule. Enrollment is a person's course instance.
Course Studio	Authoring UI at /courses/[id].
Completion mode	Rule that treats the course as complete.
Assessment kinds	PRE, FINAL, SURVEY, MODULE_QUIZ.
Grading queue	Manual scoring of short answer and essay.
Certificate number	Globally unique id used on /verify.
Recertify	Time-based re-open of completed training.
SCORM	Imported packages, version 1.2 only.
ILT / VILT	In-person / virtual instructor-led sessions.
Compliance package	ZIP of enrollments, overdue training, and audit CSV.
Job secret	Header that authorizes scheduled maintenance jobs.
Zynext TalentHub	The product name used across the learner app, admin, platform console, and this proposal.

Headlines you can put on a slide

- Training that follows your org chart — not a flat class list.
- Assign once to a department; enroll everyone who belongs there.
- Completion is a rule, not a checkbox.
- Seven question types. A grading queue for the ones that need a human.
- Certificates with unique numbers the public can verify.
- Recertify on a clock — expired proof does not linger.
- Managers see their people. Nobody else.
- Eleven analytics views. Seven reports. One compliance ZIP.
- Multi-tenant by design: many organizations, one platform operator.
- MFA, OIDC, lockout, and an audit trail — before the questionnaire.

- From invite to issued certificate, without a second tool for quizzes or PDFs.
- Course Studio: video, documents, SCORM, live sessions, and exams in one outline.

Zynext TalentHub client proposal · Grounded in the running product as of 1 September 2026 · Not a claim of SOC 2, ISO 27001, customer counts, or uptime. Companion source: docs/proposals/CLIENT_PROPOSAL.md.
